

SFT Form Action Control - Update form Extension

This controls the actions on the form. Select the condition that makes the action available and see the message as necessary. This extension is used in the Record Update form.

Extension and Control Templates

☐ Update TABLEONE record on disk
☐ Cancel the Current Operation
☐ Call the Help
☐ Validate a record against the dictionary
☐ Configure View Only form mode
☒ **SFT Form Action Control**

☐ Show on Procedure Properties

Extension Controls use of Form Actions.
For Example restrict record DELETE unless the User is Administration.

Allow Insert Condition?:
Allow Change Condition?:
Allow Delete Condition?:
Allow View Condition?:

Failed Message? (please use quotes to delimitate string)

Use the 'Allow Insert/Change/Delete/View Condition?' fields to control the actions availability. IF the field is empty the action is allowed. If the condition is not met the action is not allowed. For example in the above, Delete is only allowed if the GLO:USER = 'ADMIN', all other actions are allowed.

The Failed Message, if entered, will be shown if the action is not allowed.

SFT Browse Action Control – Browse Form Extension

Browse Table Extension Template. This will set the table action availability as the conditions dictate

Extension and Control Templates

☐ Show on Procedure Properties

Extension Controls use of Browse Update Actions.
For Example restrict record DELETE unless
the User is Administration.

SFT Browse Row Action Control – Browse Row Extension

A Code Template that you apply in the 'NewSelection' Embed point of a browse table.

This template supports your limiting an action to the row currently selected. For example, only the person who put the record in may delete or change it.
